

STATEMENT OF INTENT

MHML is committed to high standards of Health, Safety and Environmental Management for all its activities and operations, for everyone who is directly employed and for its partners, tenants and the community.

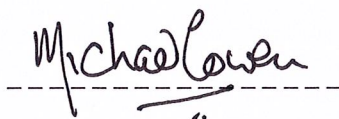

The Company will achieve the requirements of the Health and Work, Etc., Act 1974, and all related legislation including the Port Marine Safety Code. It will provide a safe healthy working environment, safe systems of work and continual development of all its staff, as one of its key management functions.

MHML will consult with its workforce on all health and safety matters and establish a broader communication network with its tenants, neighbours and other users. The company recognizes that its work activities have a wider impact upon the harbour community and it will therefore seek support and co-operation with other Employers with the same commitment to health and safety.

The Company will work with the Harbour Authority to protect the environment and maintain a team of trained oil spill responders. It will also ensure that its assets are maintained and operated in a professional, safe and appropriate manner.

An internal audit will take place every two years, where an Action Plan will be written to assist with the continual improvement of its health and safety performance, demonstrating its commitment (using evidence) in promoting good health and safety practices. To verify the system, an external audit will be undertaken every four years by a competent contractor.
